## DETAILED ACTION

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-10 and 12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Satoshi et al (JP 10-248958) in view of Oka (4,729,567). Regarding claims 1 and 8, Satoshi discloses a golf ball comprising a core and a cover. The hardness of the cover layer between 58 and 72 is an obvious feature since Satoshi discloses identical ionomers for the cover materials, Himilan 1557, 1605, 1652, 1705, 1706, 1707, 18855, 1856 and Iotek 7010, 8000. The golf ball has a diameter of 42.7 mm (para 28). Regarding claim 2, the core has a deformation from 2.5 to 4.5 mm with an initial load of 10 kgf and a final load of 130 kgf. Regarding claims 3 and 4, the core layer comprises a 100 parts of a polybutadiene rubber, 15-45 parts by weight of zinc acrylate, 0.2 to 5 parts by weight of an organic peroxide, and 0.05 to 3 parts by weight of an organic disulfide compound. Satoshi discloses dimples on the golf ball but does not disclose at least 50% of the dimple having a contour length greater than 11.6. Applicant defines the contour length (x) as the diameter of the dimple (D) multiplied by  $\pi$ . Solving for D gives a diameter of at least 3.69 mm to provide a contour length of at least 11.6 mm. Table 2 of Oka teaches a golf ball wherein at 64.5% and 72% of the dimples have a

Art Unit: 3711

contour length greater than 11.6 mm, embodiments 6 and 7. Regarding claims 9 and 10, Oka teaches from 372 and 432 dimples in embodiments 6 and 7, respectively. Regarding claim 12, Oka teaches 64.5% and 72% of the dimples have a contour length greater than 11.6 mm, embodiments 6 and 7. Regarding claims 1, 5, 6 and 7, the golf ball compressive deformation, initial velocity, and total distance of the golf all are obvious features of Satoshi in view Oka since the material make up is the same for each layer as shown by Satoshi and the dimple dimensions are shown by Oka. One skilled in the art would have modified Satoshi in view of Oka for enhanced flight characteristics.

### ***Response to Arguments***

Applicant's arguments with respect to claims 1-10 and 12 have been considered but are moot in view of the new ground(s) of rejection.

### ***Conclusion***

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not

Art Unit: 3711

mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
